Uvex® Introduces Reading Magnifiers as Part of Uvex FitLogic™ Lens Assortment

- Individual bifocal readers molded directly onto Uvex FitLogic clear lens
- Uvex FitLogic comfort provides adjustment features for face, cheekbone, ear and nose profiles
- To download electronic copy or HI-RES 300 dpi JPG, go to: <http://www.trankin.com/releases/uvex/uvex7860.htm>

Smithfield, RI – Uvex has expanded its extensive lens assortment for Uvex FitLogic™ Safety Eyewear to include a selection of reading magnifiers, ideal for workers who require magnification for fine detail work, reading or inspection. With a workforce that is aging, more safety directors are finding the need to add safety eyewear with reading magnifiers to their offering. Individual bifocal readers are molded onto a clear Uvex FitLogic lens and are available in +1.5, +2.0, and +2.5 diopter strengths.

Uvex FitLogic features a floating lens design that provides excellent ventilation to minimize fogging. The extended wrap-around lens also provides extra cheek and side coverage and is made of optically perfected polycarbonate to block 99.9% of UV rays. Uvex FitLogic magnifier lenses are hard coated to provide additional protection from scratching.

Utilizing a combination of design and material technology, Uvex FitLogic is the first safety eyewear that lets wearers adjust their eyewear at four different points to match their own custom fit profile. This gives the wearer the flexibility to position the magnifier in the correct position for each person's face.

An innovative frame design with a cushioned, lightweight browbar adjusts to the wearer's face. Soft and flexible with spring-like action, the Uvex FitLogic frame has enough tension to fit comfortably on wide faces and securely on narrow faces. A pioneering nosepiece design rotates 360 degrees, pivots and slants in and out to provide a precise fit for almost any nose bridge. In addition, the temple arms ratchet up and down, then click securely in place to contour fit cheek profiles. Soft temple tips lengthen with a precise sliding action to provide better behind-the-ear comfort and many adjustment possibilities.

A combination of new technologies lies behind Uvex FitLogic's revolutionary design. Uvex is the first company to bring a patented In-Mold Assembly (IMA) process to safety eyewear. This process produces fully assembled pieces that are capable of unlimited incremental adjustment. Uvex also uses a patented Multi-Material Technology® in the Uvex FitLogic line to provide cushioned comfort at all points of contact. Soft materials provide extended comfort for all-day wear.

Uvex FitLogic safety eyewear exceeds ANSI Z87+ and CSA Z94.3 standards. Assembled in the USA, Uvex FitLogic eyewear is 100% dielectric and is backed by the Uvex lifetime frame guarantee.

The world's top-selling protective eyewear brand, Uvex has been an acknowledged leader in safety eyewear innovation for over fifty years. The pioneer of many groundbreaking innovations such as a silicone goggle body and Multi-Material Technology, Uvex is a leading brand of the Bacou-Dalloz Group, the world leader in the design, manufacturing and sale of Personal Protective Equipment (PPE). The company employs about 6,700 people and operates 48 production facilities. Bacou-Dalloz provides unmatched head-to-toe protection through three strategic business segments: head protection (eye, hearing and respiratory), body protection (gloves, clothes and shoes) and fall protection. Bacou-Dalloz offers a full product range aimed at the manufacturing, construction, telecommunications, medical, public services and other sectors. Its products are available from its distributor partners worldwide.
