

For utility workers, accidental exposure to arc flash is a serious hazard. Without the proper eye protection, the intense visible light, ultraviolet (UV) and infrared (IR) radiation produced by the arc flash can cause temporary, or even permanent eye damage or blindness.

Uvex **FlashControl**[™] lenses are specifically designed to minimize the effects of arc flash exposure. They are available in several frame styles and in two tints, Gray and Low IR Green. **FlashControl** Gray minimizes sunlight and glare and provides broad protection against accidental arc flash. These lenses filter 99.9% of UV radiation, 93% of blue light hazard and 85% of IR radiation. As a sunglass, **FlashControl** Gray lenses also provide true color recognition, allowing workers to easily distinguish wire colors. **FlashControl** Low IR lenses are ideal for indoor applications. Pale green in color, these lenses do not affect color recognition yet filter 99.9% of UV radiation and 40% of IR radiation. And, because they're Uvex, you can be confident that you are getting the protection the applications demand, with the style, comfort and fit workers want.

FlashControl Gray Options

Genesis[®]

- Best selling safety eyewear on the market
- Soft flexible fingers conform to nose and minimize slippage
- Adjustable temple length and lens inclination
- Easy and economical lens replacement system
- Meets ANSI Z87+ and CSA Z94.3
